

PSCA Self-Assessment Questionnaire - Opening Instructions

As it is a fillable PDF form, some computers seem to experience difficulties with opening. There are a variety of options to resolve this depending on your individual circumstances – see below.

You may need to update the version of Adobe on your computer. In some cases, other applicants have opened it on a different computer (eg:, work , family member, etc) and have success.

If you are using an Apple computer it may be trying to open the file in 'Preview'. Try right clicking on the file, selecting 'Open With' and then selecting 'Adobe Acrobat Reader' to force the computer to open using this option.

When accessing the questionnaire via the website it appears to respond differently depending on the internet browser you are using (Chrome, Internet Explorer, Safari, Firefox, etc). If it does not open with one, perhaps try another.

To download from the website: When you click on the link, it will try to open in a browser and you will see a white page that says "Please wait..." Because this is a form-fillable pdf, it will not open in your browser. To open the PDF:

1. Click to open file
2. If you see a white page that says "Please wait..."
3. Click the download button (circled in red in the image below) and then 'Save As' – save it to your hard drive (i.e., on your desktop or in your Documents).
4. Close out of your browser
5. Find the document in the location where you saved it and open it from there (you can even manually select to open it via Adobe).
